

Framework summary

Appendix A

INVESTMENT WITHIN THE FRAMEWORK

Healthy pregnancy, early childhood, children and young people

To ensure a Healthy pregnancy and optimal health in early childhood within identified target communities

To ensure children and young people within identified target communities achieve the best possible health to gain their best educational outcomes.

Breast feeding

Healthy weight programmes

Teenage pregnancy / sexual health programme

Smoking in pregnancy

Family Intervention Project

Access to health related services and tackling the Major killers

To ensure timely access to quality primary care services, prevention programmes and opportunities for health improvement in all ages.

To reduce levels of premature mortality (under 75) from the major killers; heart disease, cancer and suicide by identification and increased engagement of those at greatest risk in both high quality treatment and prevention programmes.

Cardiovascular disease risk assessment and management programme

Health referral programme and weight management

Smoking cessation

Alcohol tier 1 and 2 services

Strengthening disadvantaged and vulnerable individuals and communities and addressing the wider determinants of health

To increase the capacity and resilience of target vulnerable communities by improving levels of participation and equipping them with skills and resources to bring about change in their lives.

To create an inclusive environment where people feel safe and have access to resources and opportunities conducive to improving health

Citizens Advice Bureau programme

Health trainer/health champion programme

Local Strategic Partnership (districts) Priorities inequalities local action

Community safety – domestic violence,

Housing and homelessness

Physical health of mental health service users

THE FULL FRAMEWORK

PURPOSE

To ensure a Healthy pregnancy and optimal health in early childhood within identified target communities

How will know we have achieved this?

We will see the number of perinatal and infant deaths across the county falling and there will be a 10% reduction in the proportion of babies born below 2.5kg in the target areas compared to the Derbyshire average.

What key successes will contribute to this?

- Vulnerable and “at risk” mothers (inc teenagers) identified in “Maternity Matters” will be routinely identified at the earliest opportunity and will experience timely intervention to meet their needs
- We will implement care pathways and a programme of support through pregnancy and postnatally for target populations identified in Maternity Matters, e.g. drug users, those with mental illness.
- Local people, in particular local women in the target areas will be aware of a proactive approach that improves access and engagement with services before and during pregnancy and after giving birth.
- Local families will make use of high quality paid and unpaid support (formal and informal) as an integral part of services provided throughout the pregnancy and up to school age.
- More women and their families achieve a smoke free pregnancy and home and sustain that success through the child’s early years, making use of customer focused support.
- Local women who become pregnant will be accessing a programme of support to optimise their nutritional status through pregnancy including support for weight management
- A greater proportion of local women will be engaged in a programme of support for initiation and sustained breastfeeding in target communities
- Through uptake of Paid/unpaid/mutual Infant feeding support local families will successfully wean their child and maintain their health weight.
- Greater numbers of young women under 19, in the target areas delay the age of first pregnancy and subsequent pregnancies, pursuing a career or further education

How will we know we are heading in the right direction?

A selection from a number of measures:

Maternal obesity levels
Sustained engagement in ante natal programmes
Smoking status in pregnancy (and 1 year on)
Breastfeeding initiation
Mean age of first pregnancy
Obesity levels at 2.5 years and at school entry
Vaccination rates
Child poverty rates

PURPOSE

To ensure children and young people within identified target communities achieve the best possible health to gain their best educational outcomes

How will know we have achieved this?

Attainment and progression to vocation/higher education is improved amongst children in the identified target areas, moving them closer to national performance rates.

What key successes will contribute to this?

- System for early identification and intervention for children and families at risk as determined by “Every Child Matters”
- Engagement of eligible families, parents and child carers in programmes to build skills and confidence
- Health programmes delivered to children in care/looked after children and chaotic families
- Delivery of Family intervention project/ whole family approach to families in target areas who meet threshold criteria
- Engagement of children in target areas in educational programmes to develop skills in managing and minimising harm from risk behaviours
- Engagement of children and family members in opportunities for physical activity both in and out of school
- Improved uptake in target areas of free school meals and breakfast clubs.
- Children gaining skills in buying and preparing nutritious food through delivered programmes.
- Engagement of children in development programmes for managing life transition confidently and positively
- Utilisation of services relating to minimising risk and supporting responsible approaches to sexual health, emotional and mental health
- Engagement with accessible mutual/peer support systems
- Optimal implementation of child health programme in target areas

How will we know we are heading in the right direction?

A selection from a number of measures:

School absenteeism rates

Aspiration measure - proportion advancing to FE

Proportion of Not in education, employment or training (NEETS) as a % of total population

Teenage conception rates

Sexually transmitted disease rates

Obesity levels at year 6

free school meal uptake

Levels of School meal entitlement vs. Healthy school status

Under 18 alcohol admission rates

Dental health at age 5

PURPOSE

To ensure timely and appropriate access to quality primary care services, hospital services and prevention programmes and opportunities for health improvement in all ages.

How will know we have achieved this?

The difference in uptake of services by people in the target areas of Derbyshire compared to the levels in the county as a whole will narrow year on year and the utilisation of services will move closer to the expected level based on identified prevalence of disease in these communities.

What key successes will contribute to this?

- Co-location and flexible opening and/or outreach for more accessible services where people in disadvantaged/ vulnerable communities go
- Equitable targeting of resources and raising quality of service provision within disadvantaged communities
- Provision and/or referral mechanisms to services supporting /motivating for behaviour change: Addictions – tobacco, alcohol, drugs; weight management; physical activity; cognitive behaviour therapy
- Incentive schemes run in collaboration with local communities/families to encourage adoption of desired behaviours.
- Development of interagency mechanisms to monitor the most vulnerable – mental health service users, people with learning disability, frail elderly, domestic violence including possible early warning system.
- Programmes targeting additional support to vulnerable service users meeting threshold criteria.
- Monitoring and benchmarking of Quality and Outcomes Framework exception reporting and exception coding by general practice
- Development of Information packages, signposting mechanisms, motivational and advocacy support including health trainers and health champions.
- Local people able to access transport to attend for appointments offered by practices.

How will we know we are heading in the right direction?

A selection from a number of measures:

Practice referral rates to behaviour change services – smoking, weight management, etc (actual vs. expected)

Psychological therapies referral

Health equity audit of utilisation of pathways identified as a priority in the Strategic Plan e.g. stoke rehabilitation and dementia care.

Changes in patterns of service usage

PURPOSE

To reduce levels of premature mortality (under 75) from the major killers; heart disease, cancer and suicide by identification and increased engagement of those at greatest risk in both high quality treatment and prevention programmes.

How will know we have achieved this?

There will be a 40% reduction in the death rate due to heart disease, stroke and related diseases in people less than 75yrs. As importantly we will see a 10% reduction in the inequalities gap between the spearhead area compared to the population of Derbyshire as a whole.

There will be a 20% reduction in the death rate due to cancer in people less than 75yrs .We will also see a reduction in the inequalities gap of at least 6% between the target areas and the population as a whole.

There will be a 20% reduction in the mortality rate due to suicide and undetermined injury in people less than 75yrs.

All the above by 2010 based on 1997 baseline (Saving Lives Our Healthier Nation Targets).

What key successes will contribute to this?

- More vulnerable and “at risk” groups within the population will be identified through a systematic CVD risk assessment programme resulting in an increased uptake of interventions aimed at supporting healthy lifestyle.
- Engaging with households proactively e.g. home visiting, who do not respond to traditional invitation methods
- Programme of awareness raising, information and support within the target areas to encourage timely presentation of symptoms to enable early intervention.
- Rapid access to diagnostic services for CVD, heart failure, Cancer and COPD
- More people will be supported to take part in effective management programmes for stopping smoking, cardiovascular risk reduction, diabetes, atrial fibrillation and obesity. This may be provided within a practice setting or as an outreach service
- Effective Chronic disease management planning
- Secondary care identify “at risk” patients and refer onto relevant support
- Maximised vaccination and immunisation uptake within target at risk groups.
- Local people will be signposted by members of the Primary Health care Team to opportunities within their community to improve health i.e. fitness groups, home improvement agency, Citizens advice bureau, green gym.
- Local people are able to access information about what is available within there area through a variety of communication channels.
- Local people will able to access local rehabilitation programmes and exercise referral.
- More local people will be supported to adopt a healthy lifestyle through the provision of local peer support – community health champion model.
- All organisations working together for the health of the population using Local Strategic Partnerships as a conduit to this.

How will we know we are heading in the right direction?

A selection from a number of measures:

Numbers of people receiving optimal treatment packages – people whose blood pressure is being controlled within defined limits

Numbers engaging in behaviour change support programmes

Smoking status of the practice population

Number of people maintaining lifestyle change - % undertaking sustained exercise after 12 months

Screening programme uptake

Adult participation in sport

PURPOSE

To increase the capacity and resilience of target vulnerable communities by improving levels of participation and equipping them with skills and resources to bring about change in their lives.

How will know we have achieved this?

We will observe an increase in the number of people within the target communities taking part in health related activities. More people within identified vulnerable communities will engage in skills development programmes and people in the target communities will report greater confidence in their ability to change their own or family behaviour and cope with risk situations.

What key successes will contribute to this?

- People making use of locally accessible financial support / debt management and advice services particularly in target areas. Referral mechanisms for front line workers to use.
- People of working age within target areas engaged in programmes of condition management and skills development to increase employability and/or engagement in society.
- Increased social activities through social support networks to combat isolation amongst vulnerable target groups e.g. those living alone and carers.
- All households of vulnerable elderly and families with child under 5 will have the home environment assessed for security, warmth and safety on a regular basis.
- People in the target areas/groups will have access to and engage in local programmes to develop skills in managing chronic conditions and behaviour change
- People within target areas are reporting more opportunities to influence their local environment and the provision of services to their community.
- Evidence of communities drawing down available resources to tackle issues within their community
- Local people will be supported to access timely income maximisation and debt management advice.
- Accessible crisis resolution service and possible rapid response mechanisms for situations where people are at risk of harm, e.g. domestic violence, mental illness.
- Evidence of communities engaging in the running of NHS services and influencing service development.
- Evidence of intergenerational, inter faith and inter community supportive activities within target areas.
- People report easy access to and satisfaction with services to support living independently in their own home.

How will we know we are heading in the right direction?

A selection from a number of measures:

Increase in the proportion of people receiving full benefit entitlement

Numbers of eligible people in return to work programmes

Reduced reporting of social isolation particularly for more vulnerable groups of people

All people living with a long term condition offered at least one educational programme to build their skills and confidence managing their condition

A reduction in incidents resulting in harm, requiring A&E attendance.

Carers receiving assessments

End of life care enabling death at home

People maintaining independent living

PURPOSE

To create an inclusive environment where people feel safe and have access to resources and opportunities conducive to improving health

How will know we have achieved this?

In three and six years, people will report greater satisfaction with where they live in the target areas and this will be reflected in changes in broad measures such as Index of Multiple Deprivation, closing the gap with the Derbyshire and England average score

What key successes will contribute to this?

- People in target areas report better transport links and connectivity to health related services, employment and health related opportunities
- Policy embedded in local authority planning guidance to engender a safe environment and limit exposure to alcohol, tobacco, fast food availability and gambling outlets within communities.
- Greater participation by people in target areas in recreational activity including the use of green space, outdoor resources and countryside pursuits.
- Elevation of household income in the target areas closer to the national average through delivery of an integrated programme to alleviate poverty, linking people in target communities to employment and training opportunities, benefits advice and debt management
- Partner agencies within the Local Strategic Partnerships signed up to model employment practice as exemplars in demonstrating a safe and healthy working environment and providing support to improve the health of their workforce.
- Expansion in the target areas of coverage of all housing stock achieving decent housing standard and a target measure of fuel efficiency.
- Increase in the proportion of households in target areas within 500m or 15 minutes walking distance of a fresh produce retailer.
- Urban design for “Healthy Towns” that have an environment planned to encourage physical activity integral to everyday life.
- Young people in the target areas report greater satisfaction with recreational facilities and activities available to them within 15 minutes walking distance.
- Programme of anti crime measures – street and domestic - including drugs within target areas resulting in reduced reported fear of crime.

How will we know we are heading in the right direction?

A selection from a number of measures:
Monitoring of retail outlets in communities
Uptake of benefits, training opportunities and jobs
Adults with learning disability in employment
Partner agencies signing up as “good” employer
Monitoring availability of fresh produce
Crime levels and anti social behaviour incidents
Reduction in winter related deaths
Violence related admissions
Reduction in road injuries
Levels of leisure use, club membership and numbers of recreational groups
Affordable homes
Access to services by walking and cycling

PURPOSE

To develop underpinning systems to support the implementation, resourcing and evaluation of the framework

How will know we have achieved this?

We will be able to monitor progress and measure the success of programmes in the target communities, communicate these to partners and the public, and review where changes need to be made.

What key successes will contribute to this?

- Development of information systems to support needs assessment, performance management, audit, evaluation and impact assessment of the elements of the framework in relation to health inequalities
- Development of a workforce programme building new capacity to work within target communities and increase the skills of the existing multi agency workforce to meet the challenge of reducing health inequalities.
- Development of a performance management framework to ensure targeting of resources and value for money.
- Implementation of an equity “fair share” finance policy moving outlying general practices closer to their target position
- Community engagement mechanisms operating with the target communities enabling joint local work programme development.
- Organisational development programme including audit and reflective learning (with engagement of local communities) to ensure a responsive and effective approach to reducing inequalities.
- Impact of policy implementation on health inequalities is an integral consideration in decision making by the PCT and other partner organisations.

How will we know we are heading in the right direction?

A selection from a number of measures:

Information systems developed and being utilised

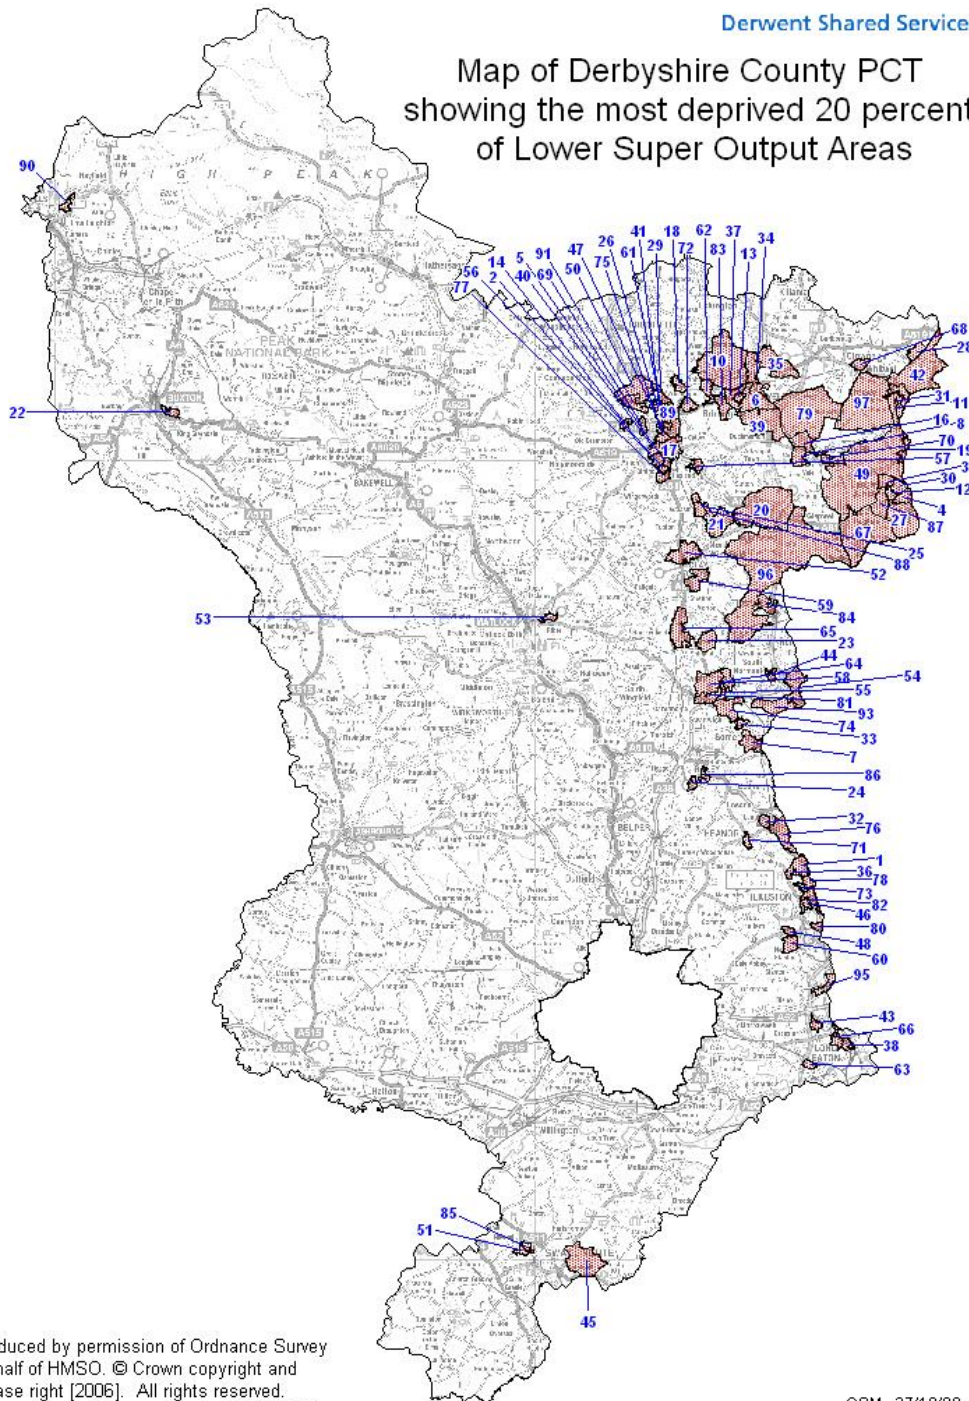

Workforce capacity and skills strategy being implemented

Finance/resources freed up for investment to target inequalities

Organisational development

Audit and reflective learning systems operational within the six programme areas

Map of Derbyshire County PCT showing the most deprived 20 percent of Lower Super Output Areas
